

CV FRONT PAGE

Surname, first name:	Gómez Cesteros, David		
Date of last update:	19/05/2025		
e-mail address:	david.gomces@gmail.com		
External service provider information:	Date of birth: 28/09/1994	Nationality: Spanish	
Type of contract:	<i>Employer:</i> <i>Date of recruitment:</i> ☐ Permanent <i>(Check the appropriate)</i> <i>Number of months working for the tenderer:</i> ☐ Non-permanent <i>..... months</i> ☐ Freelancer: <i>Name of freelance company:</i> <i>Comments:</i> <i>.....</i> <i>.....</i>		
Current function:	Senior Mobile Engineer <i>(indicate the function in the company)</i>		
Profile for which external service provider is entered:	Date available:		
Highest relevant educational qualification:	<i>Check the appropriate :</i> ☐ Master degree or equivalent (≥ 4 years) ☒ Bachelor degree ☐ Secondary school Number of (successful) years of study after secondary school:	Certificate or diploma: “Advanced Technician in Multiplatform Application Development, Higher Vocational Education” Institute: IES Rey Fernando VI Certificate or diploma: “Advanced Technician in Multiplatform Application Development, Higher Vocational Education” Institute: IES Alonso de Avellaneda	End date of secondary school: (mm/yy): 06/14 Start date of higher studies: (mm/yy): 09/14 End date of studies (mm/yy): 06/17
Languages: (indicate level of skill: from 1=basic to 5=excellent)	English: French: German: Spanish: Other(s):	Spoken 4 --- --- 5 ---	Written 4 --- --- 5 ---
Professional experience	Date IT career started: March 2017		Number of years/months of experience (apart from the studies): +8 Years

Specific expertise(s) (with number of months experience for each)	Frontend Development (Angular, Ionic, JavaScript, TypeScript, HTML5, CSS3, SCSS, Responsive Design) – 98 Months Hybrid Mobile App Development (Ionic, Capacitor, Cordova, Android Studio, Xcode, TestFlight) – 98 Months Backend & API Development (Java + Spring Boot, PHP + Symfony, REST APIs, Node.js/Express) – 50 Months Databases & Data Formats (MySQL, PostgreSQL, MongoDB, Snowflake, JSON, XML/CSV) – 60 Months DevOps & Deployment (Docker, Jenkins, CI/CD Pipelines, AWS, Azure, Bitbucket, GitHub) – 50 Months Testing & QA (Karma, Jasmine, Cypress, Protractor) – 74 Months CMS & Web Platforms (WordPress, Custom CMS, Twig, Pug) – 33 Months Project Management & Agile (Scrum, Jira, Confluence, Trello) – 70 Months UI/UX & Visualization (Bootstrap, AG Grid, Figma, Google Maps API, Dynamic Charts) – 75 Months Security & Compliance (AES, SSL/TLS, OAuth2) – 9 Months Cross-platform Tooling & Utilities (Visual Studio Code, macOS, Windows, Git) – 98 Months
Standard(s) or certificate(s)	
Proposed level	

CV Summary

During the last 8 years, the consultant has developed a solid and diverse career in Software Development, with a strong focus on hybrid mobile applications, full-stack web development, and scalable backend systems. His professional experience spans sectors such as gaming, HRTech, education, and retail analytics, having contributed to more than 40 projects for international companies and organizations, including Aristocrat Gaming, Eurofirms, NielsenIQ, Telefónica Educación Digital, and Greenpeace.

He has consistently worked in agile, product-oriented environments using a wide array of modern technologies such as Angular, Ionic, TypeScript, Java (Spring Boot), PHP (Symfony), MongoDB, MySQL, Docker, Node.js, and AWS. His experience also includes CI/CD pipelines, containerized infrastructure, performance testing (JMeter), and DevOps workflows, showing strong versatility across the stack.

The consultant has held various roles depending on the project's nature and maturity, ranging from Frontend and Backend Developer to Technical Lead, Project Coordinator, and Senior Mobile Engineer. He has been responsible for architectural decisions, feature planning, framework upgrades, code quality enforcement, and technical mentoring within multidisciplinary teams.

He is especially skilled in the design and development of modular, scalable applications and mobile-first solutions with a focus on performance, accessibility, and cross-platform consistency. He has led platform recoveries, modernizations, and greenfield implementations, integrating third-party services, RESTful APIs, and custom CMS solutions.

Accustomed to working with distributed teams and international stakeholders, the consultant has participated in numerous planning and review sessions, providing technical feedback and aligning with both business goals and user experience objectives.

He thrives in technically demanding environments, values clean architecture and maintainable code, and is motivated by challenges that combine technical depth with real-world impact.

PROJECT EXPERIENCE	
Project name:	PlayerMax
Company (employer):	Aristocrat Gaming
Dates (start-end):	11/23 – currently
Effective number of months achieved:	19
Client (customer):	Aristocrat Gaming
Project size:	1 Project Manager, 2 UX designer, 3 QA Engineer, 1 Product Owner, 1 Architect Engineer, 1 DevOps Engineer, 1 Backend Developer, 1 Senior Mobile Engineer, 2 Front-end Developer, 1 Scrum Master
Project description: PlayerMax is a mobile-centric casino management solution developed by Aristocrat Gaming, designed to enhance player engagement and streamline casino operations. Integrated with Aristocrat's Oasis 360 system, PlayerMax offers a suite of features aimed at modernizing the gaming experience for both players and operators. Key Features: • Self-Enrollment: Players can register for loyalty programs directly through the app, eliminating the need to visit the players club desk. This feature reduces wait times and enhances the user experience. • Digital Wallet Integration: The app supports cashless transactions, allowing players to fund their gameplay directly from their mobile devices without leaving their gaming stations. • Cardless Game Connection: Utilizing the Mobile Connect feature, players can link their mobile devices to gaming machines, removing the necessity for physical player cards and promoting a seamless gaming experience. • Personalized Offers and Notifications: PlayerMax delivers tailored promotions and messages based on individual player preferences and behaviors, enhancing engagement and loyalty. • Gamification Elements: The app includes features such as trackable achievements and progressive jackpots, adding a layer of gamification that encourages continued play and interaction. • Comprehensive Dashboard: Players have access to real-time information, including balances, player status, and messages, through an intuitive dashboard interface.	

External service provider's roles & responsibilities in the project:

Mobile Application Development

- ✓ Development of the PlayerMax mobile application for iOS and Android platforms including modern frameworks for hybrid applications.
- ✓ Implement of scalable and maintainable mobile architecture following modular design principles and clean coding standards.
- ✓ Translate Figma designs into responsive, pixel-perfect user interfaces across a wide range of devices and screen resolutions.

Front-End Implementation & UI Development

- ✓ Development of views, UI components, and front-end logic directly within the mobile applications, ensuring alignment with design guidelines and usability best practices.
- ✓ Implement of visual behaviours, navigation flows, and dynamic layouts adapted to both platforms and various screen sizes.
- ✓ Refinement and adaptation of interface elements to support multilingual content and accessibility considerations.
- ✓ Implement of unit tests for front-end pages and components to ensure functional integrity, maintainability, and early detection of regressions.

Code Quality & Review Processes

- ✓ Execution of regular code reviews and enforcement of a pull request policy requiring at least two developer approvals before merging into the main codebase.

Requirements Analysis & Technical Planning

- ✓ Participate in backlog refinement and sprint planning sessions with Product Owners, including requirement analysis, breaking down requirements into technical tasks, and providing input on complexity and feasibility to support accurate sprint planning.
- ✓ Contribute to architectural discussions and promotion of component reuse, scalability, and long-term maintainability.

Integration & Cross-Team Coordination

- ✓ Integrate of RESTful APIs provided by the backend team, ensuring secure communication, proper data handling, and alignment with business logic.
- ✓ Collaborate with UX designers for the validation of design feasibility, resolution of edge cases, and refinement of user interactions.
- ✓ Support to QA engineers in test case definition, issue reproduction, and feature validation during testing phases.

Technologies and methodologies used by the external service provider in the project:

Programming Languages and Frameworks:

- Ionic 7.1.5 with Angular 15.2.2 for cross-platform mobile and web application development
- TypeScript, JavaScript, HTML5, SCSS for UI development and application logic

Software Architecture:

- Modular MVC architecture with strong separation between graphical user interface and business logic
- GUI layer fully decoupled from application logic, enabling parallel development and simplified deployment of alternative front-end solutions
- Active data pipe mechanism to deliver only the necessary data to the GUI layer, improving performance and responsiveness
- RESTful API integration for communication with backend services

Platforms and Tooling:

- Capacitor for native mobile integration and plugin management
- Node.js 18, npm 10.2.3, Angular CLI 15.2.2 for development tooling
- Gradle 7.4 for Android builds, Java 17 as runtime environment
- Target platforms: Android API 36, iOS 18 on macOS Sequoia 15

IDEs:

- Visual Studio Code, JetBrains WebStorm, Android Studio, Xcode

Version Control and DevOps:

- GitHub for version control and pull request management
- TFS for release control and code repository integration
- CI/CD pipelines for build automation and testing environment delivery
- Code quality monitoring through SonarQube

Project Management & Documentation Tools:

- Jira for sprint planning, issue tracking, and team coordination
- Confluence for centralized technical documentation and knowledge sharing

Databases and Backend Communication:

- MySQL for relational data storage and user/session management

Testing Tools and Frameworks:

- Unit testing using with Jasmine/Karma for Angular

Monitoring & Analytics:

- Google Analytics and Google Tag Manager for event tracking, usage metrics, and performance analysis
- Voiceover integration in pages and components for iOS and Android devices to maintain accessibility

Development Methodology:

- Agile Scrum for iterative development, including sprint planning, backlog grooming, and daily stand-ups

PROJECT EXPERIENCE	
Project name:	BuscoExtra
Company (employer):	Eurofirms
Dates (start-end):	03/2023 – 11/2023
Effective number of months achieved:	9
Client (customer):	Eurofirms
Project size:	1 Product Owner, 1 Full-stack Developer, 1 Freelance Assistant Developer
Project description: BuscoExtra is the first fully digital temporary employment agency (ETT) specialized in the hospitality sector in Spain, part of Eurofirms Group. The platform connects hospitality businesses (bars, restaurants, hotels) with qualified professionals such as waiters, cooks, and kitchen assistants, streamlining hiring and legal compliance for both employers and workers. Key Features: • Comprehensive admin platform: Built a web-based admin panel (Angular) enabling Eurofirms staff to manage job postings, candidate selection (if required), onboarding processes, and monitor recruitment analytics with role-based access control. • End-to-end digital hiring: Developed fully functional hybrid mobile applications (Ionic + Angular) for Android and iOS, allowing candidates to register, complete their profiles, and apply for hospitality jobs, while generating real-time legally compliant employment contracts according to Spanish regulations. • Robust API integration: Designed and maintained a secure PHP Symfony REST API that connects the mobile app, admin portal, landing website, and blog, ensuring efficient and GDPR-compliant data exchange across all components. • Unified web presence: Developed and maintained the main landing website (Angular) and the official blog (WordPress), supporting user acquisition, engagement, and SEO optimization. • Gamification Elements: The app includes features such as trackable achievements and progressive jackpots, adding a layer of gamification that encourages continued play and interaction. • Agile and automated delivery: Implemented continuous integration and deployment pipelines (Docker, Bitbucket, Jira), automated testing, and monitoring to ensure high availability, scalability, and rapid incident response within a Scrum-based agile environment. • Automated matching for employers: Implemented a fully automated workflow for selected employers, enabling them to publish job offers and receive candidate applications through an automatic matching system that fills positions within minutes, without the need for manual selection or intervention.	

External service provider's roles & responsibilities in the project:

Project Leadership & Coordination

- ✓ Act as project lead for the technical relaunch of BuscoExtra after its acquisition by Eurofirms, overseeing all phases from recovery to delivery.
- ✓ Coordinate and delegated tasks to a freelance assistant developer, ensuring alignment with project goals and technical standards.
- ✓ Lead sprint planning, prioritization, and progress tracking within an agile Scrum environment.

Project Recovery & Modernization

- ✓ Conduct a comprehensive audit of the legacy codebase, identifying obsolete dependencies and technical debt.
- ✓ Upgrade all frameworks, libraries, and dependencies to current stable versions, resolving compatibility and security issues.
- ✓ Re-establish stable development and deployment pipelines to support ongoing work.

Full Stack Development

- ✓ Maintain and refactored existing functionalities across the hybrid mobile app (Ionic/Angular), admin web portal (Angular), backend API (PHP Symfony), and public-facing websites (Angular, WordPress), ensuring performance, scalability, and compliance with legal requirements.
- ✓ Lead the upgrade of the entire technology stack, including updating Ionic to the latest version and migrating from Cordova to Capacitor for improved native integration and maintainability, replacing the old Cordova plugins and configurations with modern alternatives, ensuring and leveraging new platform features.
- ✓ Develop and implemented new product features as required, such as the automatic matching system that connects selected employers with suitable candidates in the area of the job offer, enabling fully automated and rapid job fulfillment.
- ✓ Worked with local XAMPP servers for backend development and testing, and managed production deployments using Nginx to efficiently handle server configuration and traffic management.

Automated Solutions & Continuous Delivery

- ✓ Develop automated matching workflows for selected employers, enabling job offers to be published and filled in minutes without manual intervention.
- ✓ Implement automated testing, code reviews, and continuous integration/deployment pipelines (Docker, Bitbucket, Jira).
- ✓ Monitor platform health and responded rapidly to incidents to ensure high availability.
- ✓ Liaise with Eurofirms management to gather requirements, define priorities, and align technical solutions with business objectives.

Technologies and methodologies used by the external service provider in the project:

Programming Languages and Frameworks:

- Ionic 5 (upgraded from Ionic 3) with Angular 13 (upgraded from Angular 8) for hybrid mobile and web application development
- PHP Symfony 3 for backend API
- TypeScript, JavaScript, HTML5, SCSS
- XAMPP, nginx for local development

Software Architecture:

- Modular MVC architecture with clear separation of concerns between UI and business logic
- RESTful API design for secure and scalable data exchange between mobile app, admin panel, and web assets
- Automated matching algorithms for real-time candidate-employer pairing

IDEs:

- Visual Studio Code, Android Studio, Xcode

Platforms and Tooling:

- Capacitor (migrated from Cordova) for native mobile integration
- Node.js, npm, Angular 13, Docker for containerization
- MySQL for relational data storage
- WordPress for blog and content management

Special Tools and Services:

- Jira and Confluence for agile project management and documentation
- Bitbucket and Git for version control and CI/CD pipelines
- SonarQube for code quality and static analysis
- AWS for cloud hosting and analytics

Testing Tools and Frameworks:

- Unit and integration tests with Jasmine and Karma for Angular
- PHPUnit for backend API
- End-to-end testing with Cypress

Methodologies:

- Agile Scrum for iterative development, sprint planning, and continuous delivery
- Code reviews, automated deployments, and monitoring for high availability and rapid incident response

PROJECT EXPERIENCE	
Project name:	Shelf Architect
Company (employer):	NielsenIQ
Dates (start-end):	03/2022 – 03/2023
Effective number of months achieved:	12
Client (customer):	NielsenIQ
Project size:	1 Technical Lead, 3 Full-stack Developer, 1 Front-end Developer, 2 Back-end Developer
Project description: NielsenIQ Shelf Architect is a cloud-based platform designed to optimize retail shelf space and assortment strategies for leading retailers and manufacturers. The solution leverages advanced analytics and real-time elasticity modeling to determine the optimal placement of products on shelves. The system enables users to simulate and visualize different shelf configurations, instantly calculating how changes in product positioning affect projected sales, estimated profit, and overall shelf performance. By integrating historical sales data, consumer behavior, and contextual variables, Shelf Architect provides actionable recommendations to maximize revenue and improve planogram compliance.	
Key Features: • Real-time elasticity analysis to measure how changes in product location and shelf space allocation impact sales and profitability. • Interactive simulation engine that allows users to modify shelf layouts and immediately see updated sales forecasts and profit estimations. • Real-time data capture and image recognition for out-of-stock detection. • Customizable dashboards and analytics for store performance. • Intelligent recommendations for optimal product placement, highlighting high-traffic and high-impact shelf zones. • Seamless integration with retail audit and KPI tracking tools.	

External service provider's roles & responsibilities in the project:

Project Leadership & Coordination

- ✓ Manage sprint planning, task prioritization, and progress tracking using Agile Scrum methodologies.
- ✓ Collaborate with stakeholders to translate business requirements into technical solutions for retail optimization.

Full Stack Development

- ✓ Develop real-time simulation features using WebSockets and reactive programming to enable dynamic shelf configuration updates.
- ✓ Integrate AG Grid for advanced data visualization, enhancing user interaction with complex datasets.
- ✓ Build a multi-scenario simulation tool allowing users to compare up to 5 shelf layouts with instant profit projections.
- ✓ Create automated recommendation algorithms to identify high-impact shelf zones based on historical traffic and conversion data.
- ✓ Establish secure RESTful APIs connecting frontend components with MongoDB (operational data) and Snowflake (analytics).

Quality Assurance & Delivery

- ✓ Conduct code reviews and maintained 85%+ test coverage using Jasmine/Karma (frontend) and JUnit (backend).
- ✓ Perform end-to-end tests with Cypress to emulate user interactions and prevent possible failures.
- ✓ Monitor platform health using Azure Application Insights, achieving 99.5% uptime.

Technologies and methodologies used by the external service provider in the project:

Programming Languages and Frameworks:

- Angular 8–11 for the interactive frontend web application
- Java 11 with Spring Boot for backend API and business logic
- TypeScript, JavaScript, HTML5, SCSS, SASS
- AG Grid for advanced data visualization

Software Architecture:

- Modular microservices architecture with RESTful APIs for secure and scalable data exchange
- MVC pattern with clear separation between UI, business logic, and data layers
- Integration with MongoDB and Snowflake for data storage and analytics

IDEs:

- Visual Studio Code, JetBrains IntelliJ IDEA, Eclipse, Postman

Platforms and Tooling:

- Node.js 12/14, npm 6/7, Angular CLI
- Docker for containerization and deployment
- Jenkins for continuous integration, automatization and delivery
- Bitbucket and Azure DevOps for version control and project management

Special Tools and Services:

- Jira and Confluence for agile project management and documentation
- SonarQube for code quality and static analysis
- Azure for cloud hosting and resource management

Testing Tools and Frameworks:

- Unit and integration tests with Jasmine and Karma for Angular
- JUnit for backend (Java/Spring Boot)
- End-to-end testing with Cypress

Methodologies:

- Agile Scrum for iterative development, sprint planning, and continuous delivery
- Code reviews, automated deployments, and monitoring for reliability and scalability

CV experience page number for this CV:

4**PROJECT EXPERIENCE****Project name:**

Item price simulator (IPS)

Price and Promotion Management (PnP)

Revenue Management Opportunities (RMO)

Company (employer):

NielsenIQ

Dates (start-end):

11/2019 – 03/2022

**Effective number of
months achieved:**

28

Client (customer):

NielsenIQ

Project size:

1 Technical Lead, 9 Full-stack Developer

Project description:

The Retail Pricing & Revenue Management Suite is a collection of advanced web applications developed for Nielsen's global retail and CPG clients. The suite includes Item Price Simulator (IPS), Price and Promotion Management (PnP), and Revenue Management Opportunities (RMO). These tools empower retailers and manufacturers to simulate, analyze, and optimize pricing, promotion, and revenue strategies using real-time data, machine learning, and predictive analytics.

Item Price Simulator (IPS):

Enables users to simulate price changes for individual products or entire portfolios, forecasting their impact on unit sales, revenue, and market share. The tool leverages price elasticity models and integrates with historical sales data to provide accurate, scenario-based projections and margin impact analysis

Price and Promotion Management (PnP):

Provides end-to-end management and optimization of promotional campaigns. Users can plan, track, and analyze promotions, calculate ROI, and visualize performance across regions and formats. The system supports integration with POS data for real-time campaign adjustments and compliance monitoring.

Revenue Management Opportunities (RMO):

Identifies untapped revenue streams by analyzing shelf space allocation, product mix, and regional demand. The tool uses machine learning to forecast demand, optimize assortment, and generate actionable reports for finance, marketing, and operations teams

Key Features:

- **Advanced Price Simulation:** Simulate the impact of price changes on unit sales, market share, and profitability using real-time price elasticity models and scenario-based forecasting
- **Promotion Planning & ROI Analysis:** Plan, track, and analyze promotional campaigns with automated ROI calculators, dynamic heatmaps, and compliance monitoring to maximize promotional effectiveness and trade efficiency
- **Revenue Opportunity Identification:** analyze shelf space allocation, product assortment, and regional demand to uncover untapped revenue streams and optimize product mix for higher profitability.
- **Data-Driven Decision Support:** integrate historical sales, POS, and market data from sources like Snowflake and MongoDB to provide actionable insights and predictive analytics for pricing, promotion, and assortment strategies.
- **Scenario Comparison & What-If Analysis:** enable users to compare multiple pricing, promotion, or assortment scenarios, visualizing the projected business outcomes and risks in real time.
- **Interactive Dashboards & Visualization:** offer intuitive dashboards and advanced data visualization (e.g., AG Grid, dynamic charts) for monitoring key performance indicators, compliance, and market trends.
- **Automated Reporting & Compliance:** generate customizable reports for stakeholders in finance, marketing, and operations, and ensure compliance with pricing regulations and internal policies.

External service provider's roles & responsibilities in the project:

Project Leadership & Coordination

- ✓ Collaborate closely with cross-functional teams including data scientists, business analysts, and product owners to align technical implementation with business goals.
- ✓ Participate in Agile Scrum ceremonies (sprint planning, daily stand-ups, code reviews), contributing to project planning, task breakdown, and progress tracking.
- ✓ Provide technical input on feature prioritization, solution design, and process improvements.

Frontend Development

- ✓ Design and developed user interfaces, ensuring a responsive, intuitive, and visually appealing user experience.
- ✓ Implement interactive dashboards and data visualizations (AG Grid, dynamic charts) for scenario simulation, price elasticity analysis, and promotion performance tracking.
- ✓ Ensure cross-browser and cross-platform compatibility, optimizing frontend performance.

Backend Development & API Integration

- ✓ Develop robust backend services, implementing business logic for price simulation, promotion management, and revenue optimization.
- ✓ Design, build, and maintained RESTful APIs to enable secure and efficient data exchange between frontend applications, analytics engines, and external systems.
- ✓ Integrate with databases for real-time and historical data processing.

Quality Assurance

- ✓ Write and maintained unit and integration tests to ensure code quality and reliability.
- ✓ Implement automated testing, code reviews, and continuous integration/deployment pipelines (Docker, Bitbucket, Jira).
- ✓ Participated in code reviews and enforced best practices for maintainable, scalable solutions.
- ✓ Provided technical documentation for new features, APIs, and user workflows.

Technologies and methodologies used by the external service provider in the project:

Programming Languages and Frameworks:

- Angular 8–11 for the interactive frontend web application
- Java 11 with Spring Boot for backend API and business logic
- TypeScript, JavaScript, HTML5, SCSS, SASS
- AG Grid and dynamic charts for advanced data visualization

Software Architecture:

- Modular microservices architecture with RESTful APIs for secure and scalable data exchange
- MVC pattern with clear separation between UI, business logic, and data layers
- Integration with MongoDB, Snowflake and PostgreSQL for data storage and analytics

IDEs:

- Visual Studio Code, JetBrains IntelliJ IDEA, Eclipse, Postman

Platforms and Tooling:

- Node.js 12/14, npm 6/7, Angular CLI
- Docker for containerization and deployment
- Jenkins for continuous integration, automatization and delivery
- Bitbucket and Azure DevOps for version control and project management

Special Tools and Services:

- Jira and Confluence for agile project management and documentation
- SonarQube for code quality and static analysis
- Azure for cloud hosting and resource management

Testing Tools and Frameworks:

- Unit and integration tests with Jasmine and Karma for Angular
- JUnit for backend (Java/Spring Boot)
- End-to-end testing with Cypress

Methodologies:

- Agile Scrum for iterative development, sprint planning, and continuous delivery
- Code reviews, automated deployments, and monitoring for reliability and scalability

PROJECT EXPERIENCE	
Project name:	UEM Secure Exam
Company (employer):	Telefónica Educación Digital
Dates (start-end):	03/2019 – 11/2019
Effective number of months achieved:	9
Client (customer):	Universidad Europea
Project size:	2 Mobile Developer, 1 UX Designer, 1 Backend Developer, 1 Project Manager
Project description: UEM Secure Exam is a high-security hybrid mobile application developed in Ionic with Angular, designed for digital exam administration on institution-owned iOS tablets at a leading Spanish university. The app was privately distributed via the App Store and was not publicly accessible. Its main goal was to allow professors to securely deliver and manage exams, leveraging a custom CMS for exam creation and encrypted data transfer. The tablets operated in a restricted firmware or kiosk mode, ensuring that only the Secure Exam app could be used during assessment sessions and preventing any unauthorized access or multitasking.	
Key Features: • Device-Restricted Access: the application was deployed exclusively on university-owned iOS tablets, which were locked down via custom firmware or kiosk mode to restrict device usage solely to the Secure Exam app during exam periods. • CMS Integration: the app was connected to a custom content management system where professors could create, configure, and schedule exams, define time limits, and set evaluation criteria. The exam content was securely downloaded from the CMS in encrypted form, stored and accessed within the app, ensuring data protection both in transit and at rest. • Randomized Exam Content: questions and answers were randomized for each student, generating unique exams and minimizing the risk of academic dishonesty. • Kiosk/Secure Mode: the app enforced full-screen mode, disabled multitasking and system gestures, and prevented screen capture or switching to other applications during the exam session. • Agile and automated delivery: Implemented continuous integration and deployment pipelines (Docker, Bitbucket, Jira), automated testing, and monitoring to ensure high availability, scalability, and rapid incident response within a Scrum-based agile environment. • Audit and Traceability: detailed logs were generated for exam start/end times, unauthorized access attempts, and user interactions, supporting academic integrity and compliance.	

External service provider's roles & responsibilities in the project:

Feature Development & Implementation

- ✓ Develop and enhanced core functionalities of the Secure Exam hybrid application using Ionic and Angular, focusing on user experience and security.
- ✓ Integrate encrypted data workflows, enabling secure download, storage, and presentation of exam content retrieved from the custom CMS.
- ✓ Build and maintained UI components for exam navigation, timer management, and answer submission.

API Integration & Backend Coordination

- ✓ Coordinate closely with a dedicated backend team responsible for developing and maintaining the APIs required by the app, ensuring clear communication of requirements and timely delivery of endpoints.
- ✓ Subscribe to and consumed RESTful API resources from the backend, handling data synchronization, error management, and secure data transfer between the app and the CMS.

Security & Compliance

Applied end-to-end encryption protocols for all exam data, both in transit and at rest, using AES and SSL/TLS standards

Ensured strict device lockdown by supporting the app's operation within iOS kiosk mode or custom firmware, preventing access to other apps or system features during exams

Testing, Deployment & Delivery

- ✓ Wrote and maintained unit and end-to-end tests (Jasmine/Karma, Protractor) to ensure reliability and stability of new features and bug fixes.
- ✓ Prepared and managed app builds for distribution via TestFlight, enabling internal and client-side testing prior to production release.
- ✓ Supported the deployment process, including compliance checks and user onboarding for university-owned iOS tablets.

Client Interaction & Demos

- ✓ Conducted regular demos and walkthroughs for the client, presenting new features, gathering feedback, and ensuring alignment with client expectations at each project milestone

Technologies and methodologies used by the external service provider in the project:

Frontend: Ionic 4, Angular 7, TypeScript, SCSS

Security: AES encryption (via CryptoJS), SSL/TLS, iOS kiosk mode

Deployment: Private distribution via Apple School Manager or enterprise App Store. Testflight.

Testing: unit testing with Jasmine/Karma

Project Management: Jira, Confluence, Scrum

IDEs: Visual Studio Code, Android Studio, Xcode

PROJECT EXPERIENCE	
Project name:	
Company (employer):	Doers DF
Dates (start-end):	03/2017 – 03/2019
Effective number of months achieved:	24
Client (customer):	<i>Greenpeace, Nestlé, San Miguel, Clece, Macmillan, Ocesa, WorkCo, Teka, Fundación Plan Internacional, World Vision Foundation International, Capkelenn, StepsLife.</i>
Project size:	1 Project Manager, 3 Full-stack Developer, 2 UX designer, 1 Freelance assistant developer
Project description: Delivery and maintenance of 30+ digital projects for a wide range of clients, including NGOs, multinational corporations, foundations, and startups. Projects included the creation and management of corporate, campaign, and event websites; custom content management systems; and hybrid mobile applications for logistics, fundraising, education, and user engagement. The client portfolio featured organizations such as Greenpeace, Nestlé, San Miguel, Clece, Macmillan, Ocesa, WorkCo, Teka, Fundación Plan Internacional, World Vision Foundation International, Capkelenn, StepsLife, among others. Key activities encompassed the setup, configuration, and ongoing maintenance of WordPress platforms, as well as comprehensive domain management and hosting support for client websites. Projects were characterized by high diversity and rapid delivery cycles, often involving simultaneous development and maintenance for multiple clients. The company environment promoted close collaboration, daily coordination meetings inspired by agile methodologies, and frequent adaptation to new industries and requirements. Participation in event-driven and real-time web development was also notable, including live coding sessions for public events and collaborations with startups and technology fairs, where functional websites were created in real time based on audience input.	

External service provider's roles & responsibilities in the project:

Web & Mobile Application Development

- ✓ Assisted in the development and maintenance of corporate websites, campaign pages, and hybrid mobile applications for a wide range of clients (NGOs, corporations, foundations, startups).
- ✓ Implemented front-end features using HTML5, CSS3, JavaScript, JQuery, AngularJS/Angular, and supported responsive design and cross-browser compatibility.
- ✓ Contributed to back-end development using PHP, SQL, and NoSQL databases, as well as integrating custom CMS and WordPress solutions.
- ✓ Participated in the creation and adaptation of templates (Twig, WordPress) and ensured seamless integration with third-party services.

Content Management & Domain Operations

- ✓ Supported the setup, configuration, and ongoing maintenance of WordPress platforms for client projects.
- ✓ Assisted in domain management tasks, including domain registration, DNS configuration, and hosting setup.
- ✓ Helped manage website content updates, plugin/theme installations, and troubleshooting for client websites.

Project Collaboration & Agile-Inspired Workflow

- ✓ Collaborated in a small, multidisciplinary team, participating in daily coordination meetings inspired by Scrum practices, even if not strictly following formal frameworks.
- ✓ Adapted quickly to shifting project priorities and requirements, often working on multiple projects simultaneously in a fast-paced agency environment.
- ✓ Communicated progress, blockers, and technical feedback with team members and project leads.

Complex Project Ownership

- ✓ Independently managed high-impact projects from concept to deployment, including:
 - Greenpeace Spain's website architecture and content migration.
 - Event microsites with dynamic forms, participant validation, and certificate generation.
 - Custom CMS solutions for multinational clients requiring multi-language support.
 - Development and management of a web application in React for Capkelenn, supporting business coaching and interactive training features.
- ✓ Collaborated occasionally with senior developers for architectural decisions and code reviews.

Technologies and methodologies used by the external service provider in the project:

Programming Languages and Frameworks

- PHP 7.1–7.3, JavaScript (ES5/ES6)
- AngularJS 1.x, Angular 5, Ionic 2/3 for hybrid mobile and web applications
- React (for selected projects, e.g., Capkelenn platform)
- HTML5, CSS3, SCSS, Twig (PHP template engine), JQuery, AJAX, Bootstrap

Content Management & Web Platforms

- WordPress 4.8–5.1 for corporate and campaign websites with custom templates in PHP using Twig
- Custom CMS solutions for specialized client needs
- Domain management, DNS configuration, and hosting setup

Databases

- MySQL 5.7 for relational data storage
- MongoDB 3.6 for NoSQL/document-based solutions

API & Integrations

- RESTful API development and consumption
- Payment gateway integration (Stripe, PayPal)
- SMTP for automated email notifications
- Third-party service integrations (analytics, CRM, SMS gateways)

Development Environments & Tools

- Visual Studio Code, PhpStorm, Eclipse
- Git for version control, Bitbucket for repository management
- Jenkins for continuous integration and deployment
- Docker for local development and deployment pipelines

Project Management & Methodologies

- Agile-inspired iterative development with daily stand-up meetings and regular delivery cycles
- Close team collaboration, rapid adaptation to changing requirements
- Participation in live events and real-time web development sessions (e.g., with Pau Garcia-Milà and at programming fairs)
