Overview

Over the past 8 years, I've built a solid career as a Full-Stack Developer, with strong expertise in frontend and mobile development—particularly with Angular, Ionic, and TypeScript—while also being capable of handling backend tasks when needed, using technologies like Java (Spring Boot) and PHP (Symfony). I've worked on over 40 projects across sectors such as gaming, HRTech, education, and retail analytics, contributing to international teams and companies like Aristocrat Gaming, Eurofirms, NielsenIQ, Telefónica Educación Digital, and Greenpeace. My experience includes designing modular, scalable, mobile-first solutions, integrating APIs and third-party services, and participating in the full development cycle—from architectural planning to deployment—within agile, product-driven environments.

Education

ADVANCED VOCATIONAL TRAINING IN WEB APPLICATIONS DEVELOPMENT (ASSOCIATE DEGREE) | IES REY FERNANDO VI | 2017

ADVANCED VOCATIONAL TRAINING IN CROSS-PLATFORM APPLICATION DEVELOPMENT (ASSOCIATE DEGREE) | IES ALONSO DE AVELLANEDA | 2016

HIGH SCHOOL / 'A' LEVEL / BACCALAUREATE IN HEALTH SCIENCES | IES DOCTOR MARAÑÓN | 2014

SUPERIOR TECHNICIAN IN PREVENTION OF LABOR RISKS | IES ALONSO DE AVELLANEDA | 2016

Knowledge and skills

LANGUAGES

- Spanish Native level
- English Professional Level

MOBILITY

- Driver license (car and motorcycle).
- International and National mobility disponibility (under conditions).

SPECIFIC EXPERTISE

Frontend Development (Angular, Ionic, JavaScript, TypeScript, HTML5, CSS3, SCSS, Responsive Design) – 98 Months

Hybrid Mobile App Development (Ionic, Capacitor, Cordova, Android Studio, Xcode, TestFlight) – 98 Months

Backend & API Development (Java + Spring Boot, PHP + Symfony, REST APIs, Node.js/Express) – 50 Months

Databases & Data Formats (MySQL, PostgreSQL, MongoDB, Snowflake, JSON, XML/CSV) – 60 Months

DevOps & Deployment (Docker, Jenkins, CI/CD Pipelines, AWS, Azure, Bitbucket, GitHub) – 50 Months

Testing & QA (Karma, Jasmine, Cypress, Protractor) – 74 Months

CMS & Web Platforms (WordPress, Custom CMS, Twig, Pug) – 33 Months

Project Management & Agile (Scrum, Jira, Confluence, Trello) – 70 Months

UI/UX & Visualization (Bootstrap, AG Grid, Figma, Google Maps API, Dynamic Charts) – 75 Months

Security & Compliance (AES, SSL/TLS, OAuth2) – 9 Months

Cross-platform Tooling & Utilities (Visual Studio Code, macOS, Windows, Git) – 98 Months

Work experience

Software Developer — Hashicorp/IBM — Navi

March 2026 – Actual

Madrid (remote)

Navi is an AI-powered internal assistant focused on securely accessing enterprise-specific knowledge and confidential data. As a Software Developer on the Navi project, I focused on building and maintaining a modern web application that enabled employees to interact with protected internal information through a secure and intuitive interface. I developed advanced UI components to support complex queries, operations, calculations, data processing, and statistical analysis powered by AI, using React and TypeScript.

I implemented backend integrations with Flowise to orchestrate LLM-driven workflows and connected the frontend to private APIs via REST and real-time channels, ensuring strict compliance with data-privacy and security requirements. In addition to frontend development, I contributed to architectural discussions, optimized Flowise agent flows, and collaborated closely with backend and AI teams. I actively participated in Agile ceremonies, code reviews, and CI/CD workflows using Vercel for deployments, helping to deliver a reliable, high-quality internal tool for IBM employees.

Tech Stack: React 18 with custom hooks,, TypeScript, SCSS, RESTful APIs, SSE Events

Architecture: Vercel, Flowise, SerpApi, Slack App, Vault, Terraform, Asible

Tooling: Node.js, npm, Cline, opencode, openai, Claude, Github Copilot

DevOps: GitHub, Github actions

Project Management: Jira, Confluence

Database: Snowflake, postgres

Frontend AI Developer — Tailor Technologies — Ask Tailor
July 2025 – December 2025
Madrid (remote)

Tailor Technologies is an AI-driven platform focused on enhancing user interaction through intelligent assistants and real-time adaptive interfaces. As a Senior Frontend Engineer at Tailor Technologies, I focused on building and maintaining a modern web application using Angular 19, leveraging advanced patterns such as Signals, NgRx, and Redux for scalable state management.

I developed dynamic, AI-powered form experiences that adapt in real time based on user input, including voice-driven commands and instructions. I integrated Server-Sent Events (SSE) for real-time communication with the backend, as well as RESTful APIs to connect with LLM-based services. My work emphasized performance, responsiveness, and seamless user experience across complex interaction flows. In addition to frontend development, I collaborated on architectural decisions, contributed to backend integration strategies, communication between the backends, and participated in Agile processes, code reviews, and CI/CD workflows to ensure high-quality, maintainable code.

Tech Stack: Angular 19 and 20,, TypeScript, SCSS, RESTful APIs, SSE Events

Architecture: Dynamic front-end ai-generated through voice commands. Hexagonal backend architecture and llm interactions.

Tooling: Node.js, npm, Cursor, openai, Claude

DevOps: GitHub, Github actions

Project Management: Jira, Confluence

Database: MySQL, postgres

Senior Mobile Engineer — Aristocrat Gaming — PlayerMax
November 2023 – Present
Madrid (remote)

PlayerMax is a mobile-centric casino management solution developed by Aristocrat Gaming, designed to enhance player engagement and streamline casino operations. Integrated with Aristocrat's Oasis 360 system, PlayerMax offers a suite of features aimed at modernizing the gaming experience for both players and operators.

As a Senior Mobile Engineer on the PlayerMax project at Aristocrat Gaming, I focused on frontend and mobile development, building and maintaining a hybrid mobile app for iOS and Android using Ionic and Angular. I translated Figma designs into responsive, accessible, and multilingual UIs, implemented navigation flows, and integrated RESTful APIs. While my main focus was on the frontend, I also contributed to architectural discussions and backend integration when needed. I actively participated in Agile ceremonies, code reviews, and testing, using tools like GitHub, Jira, SonarQube, and CI/CD pipelines to ensure code quality, performance, and a seamless user experience across platforms.

Tech Stack: Ionic 7, Angular 15, TypeScript, SCSS, RESTful APIs, Capacitor

Architecture: Modular MVC, decoupled UI/business logic, active data pipe

Tooling: Node.js, npm, Gradle, Java 17, Android Studio, Xcode, WebStorm

DevOps: GitHub, TFS, CI/CD pipelines, SonarQube

Testing: Jasmine, Karma

Project Management: Jira, Confluence

Database: MySQL

Full-stack Developer — Eurofirms — BuscoExtra
March 2023 – November 2023
Madrid (hybrid)

BuscoExtra is the first fully digital temporary employment agency (ETT) specialized in the hospitality sector in Spain, part of Eurofirms Group. The platform connects hospitality businesses (bars, restaurants, hotels) with qualified professionals such as waiters, cooks, and kitchen assistants, streamlining hiring and legal compliance for both employers and workers.

Led the technical modernization and relaunch of **BuscoExtra**, Spain's first fully digital temporary staffing platform for the hospitality sector, after its acquisition by Eurofirms. Managed all project phases—from auditing and recovering the legacy codebase to delivery and continuous deployment—coordinating a cross-functional team and aligning technical solutions with business goals. Upgraded the technology stack (**Ionic, Angular, PHP Symfony**), migrated to modern frameworks (**Capacitor**), and implemented automated candidate matching and digital hiring workflows to ensure compliance and efficiency. Designed and maintained secure **REST APIs, hybrid mobile apps**, and web platforms using modular architecture and best security and scalability practices. Established **CI/CD** pipelines with **Docker, Bitbucket**, and **Jira**, introduced automated testing and monitoring, and ensured high platform availability and rapid incident response. Worked closely with stakeholders to gather requirements, set priorities, and deliver solutions in an **agile (Scrum)** environment, fostering continuous improvement and product excellence.

Tech Stack: Ionic 5 (upgraded from Ionic 3), Angular 13 (upgraded from Angular 8),

TypeScript, JavaScript, HTML5, SCSS, PHP Symfony 3, RESTful APIs, XAMPP, nginx

Architecture: Modular MVC, clear separation of UI and business logic, RESTful API design, automated candidate-employer matching algorithms

Tooling: Node.js, npm, Docker, Capacitor (migrated from Cordova), MySQL, WordPress

DevOps: Bitbucket, Git, CI/CD pipelines, SonarQube, AWS

Testing: Jasmine, Karma (Angular), PHPUnit (backend), Cypress (end-to-end)

Project Management: Jira, Confluence

IDEs: Visual Studio Code, Android Studio, Xcode

Methodologies: Agile Scrum, code reviews, automated deployments, continuous monitoring, high availability, rapid incident response

Full-stack Developer — NielsenIQ — Item Price Simulator (IPS), Price and Promotion Management (PnP), Revenue Management Opportunities (RMO), Shelf Architect
November 2019 – March 2023
Madrid (hybrid)

As a Full Stack Developer and Technical Lead at NielsenIQ, I spearheaded the design and delivery of cloud-based retail solutions, including **Item Price Simulator, Price and Promotion Management, Revenue Management Opportunities** and **Shelf Architect**—a platform using real-time analytics and elasticity modeling to optimize shelf space and assortment strategies for global retailers. I developed interactive simulation tools with **Angular** and **Java Spring Boot**, implemented real-time data capture and advanced visualizations (**AG Grid**), and built secure **RESTful APIs** for scalable microservices. I also contributed to the **Retail Pricing & Revenue Management Suite**, integrating predictive analytics and machine learning to simulate pricing scenarios and forecast revenue, while designing intuitive dashboards and connecting data sources like **MongoDB** and **Snowflake**. My work emphasized rigorous testing (**Jasmine, Karma, JUnit**), automated CI/CD pipelines (**Docker, Jenkins**), and proactive monitoring (**Azure Application Insights**). Collaborating with cross-functional teams in **Agile Scrum**, I translated business needs into technical solutions, ensuring scalable architecture, data-driven decision support, and high-impact tools for the retail industry.

Tech Stack: Angular 8–11, Java 11 (Spring Boot), TypeScript, JavaScript, HTML5, SCSS/SASS, AG Grid, Dynamic Charts

Architecture: Modular microservices (RESTful APIs), MVC pattern, UI/business logic/data layer separation, MongoDB/Snowflake/PostgreSQL integration

Tooling: Node.js 12/14, npm 6/7, Angular CLI, Docker, Jenkins, Azure DevOps

DevOps: CI/CD pipelines, Bitbucket, Azure cloud hosting, SonarQube

Testing: Jasmine/Karma (Angular), JUnit (Java), Cypress (E2E)

Project Management: Jira, Confluence

IDEs: Visual Studio Code, IntelliJ IDEA, Eclipse, Postman

Methodologies: Agile Scrum, automated deployments, code reviews, proactive monitoring (reliability/scalability)

Mobile Developer — Telefonica Educación Digital — UEM Secure Exam, Profuturo, Miriadax, Wecorp
March 2019 – November 2019
Madrid

UEM Secure Exam is a high-security hybrid mobile application developed in Ionic with Angular, designed for digital exam administration on institution-owned iOS tablets at a leading Spanish university. The app was privately distributed via the App Store and was not publicly accessible. Its main goal was to allow professors to securely deliver and manage exams, leveraging a custom CMS for exam creation and encrypted data transfer. The tablets operated in a restricted firmware or kiosk mode, ensuring that only the Secure Exam app could be used during assessment sessions and preventing any unauthorized access or multitasking.

As a Mobile Developer for the UEM Secure Exam project at Telefónica Educación Digital, I developed a high-security hybrid mobile app for administering digital exams on institution-owned iOS tablets, focusing on user experience, security, and compliance using Ionic and Angular. My responsibilities included integrating encrypted data workflows for secure exam content management, building UI components for navigation and answer submission, and coordinating with backend teams to implement RESTful APIs and secure data transfer. I enforced strict device lockdown with iOS kiosk mode and custom firmware, implemented AES and SSL/TLS encryption for end-to-end protection, and developed randomized exam content and audit logs for compliance. Additionally, I maintained unit and end-to-end tests, managed app builds and private distribution via TestFlight, and conducted client demos, all within an Agile Scrum environment prioritizing security, reliability, and a seamless user experience.

Tech Stack: Ionic 4, Angular 7, TypeScript, SCSS

Security: AES encryption (CryptoJS), SSL/TLS, iOS kiosk mode

Deployment: Private distribution (Apple School Manager, enterprise App Store), TestFlight

Testing: Jasmine, Karma (unit testing)

Project Management: Jira, Confluence, Scrum

IDEs: Visual Studio Code, Android Studio, Xcode

Full-stack Developer — Doers DF — Greenpeace, Nestlé, San Miguel, Clece, Macmillan, Ocesa, WorkCo, Teka, Fundación Plan Internacional, World Vision Foundation International, Capkeleenn, StepsLife.

March 2017 – March 2019

Madrid

Delivery and maintenance of 30+ digital projects for a diverse client base—including NGOs, multinational corporations, foundations, and startups—covering the creation and management of corporate, campaign, and event websites, custom content management systems, and hybrid mobile apps for logistics, fundraising, education, and user engagement. Clients included organizations such as **Greenpeace, Nestlé, San Miguel, Clece, Macmillan, and World Vision Foundation International**. Key activities involved setup, configuration, and ongoing maintenance of **WordPress** platforms, as well as **domain management** and **hosting support**, often handling multiple projects with rapid delivery cycles. The company fostered close collaboration, daily coordination meetings inspired by agile methodologies, and adaptation to new industries and requirements. Notably, I participated in event-driven and real-time web development, including live coding sessions at public events and technology fairs, creating functional websites in real time based on audience input.

As a Full Stack Developer at Doers DF, I played a key role in developing and maintaining digital solutions for clients such as Greenpeace, Nestlé, and World Vision Foundation International, focusing on front-end development with HTML5, CSS3, JavaScript, and AngularJS/Angular, as well as backend work with PHP, MySQL, and MongoDB. I integrated RESTful APIs, payment gateways, and third-party services, managed WordPress setups and domain operations, and ensured smooth technical support. I led complex projects independently, including large-scale content migrations, event-driven microsites, and a React-based business coaching platform. Working within a multidisciplinary team and agile-inspired environment, I adapted quickly to changing priorities and emphasized technical versatility and close client collaboration to deliver tailored digital solutions.

Tech Stack: PHP 7.1–7.3, JavaScript (ES5/ES6), AngularJS 1.x, Angular 5, Ionic 2/3, React, HTML5, CSS3, SCSS, Twig, JQuery, AJAX, Bootstrap

Content Management: WordPress 4.8–5.1 (custom templates), custom CMS, domain management, DNS configuration, hosting setup

Databases: MySQL 5.7, MongoDB 3.6

API & Integrations: RESTful APIs, Stripe, PayPal, SMTP, analytics, CRM, SMS gateways

Deployment: Docker, Jenkins, Bitbucket

Project Management: Agile-inspired, daily stand-ups, rapid delivery cycles, live event participation

IDEs: Visual Studio Code, PhpStorm, Eclipse

Extracurricular activities

- [Dark Souls 3 mod](#) as a personal project, coded in C# modifying the memory slots of the game using Cheat Engine.
- Participated in community projects, such as mods (Cyberpunk 2077) or programming forums (Stack overflow).
- Personal projects in Python, C# and C++.
- Drone pilot certified for open category A1/A3
- PADI Advanced Open Water Diver
